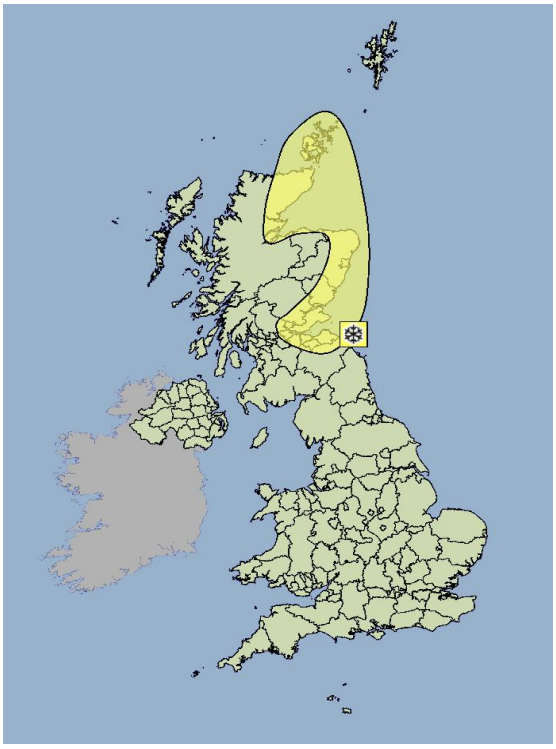
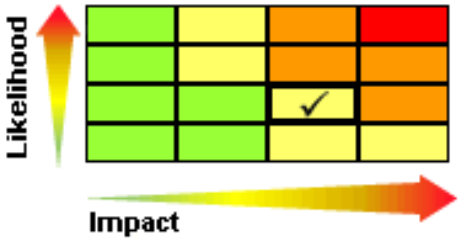
National Severe Weather Warning Service





Chief Forecasters Assessment
Frequent snow showers are likely to continue feeding in from the North Sea on a very cold easterly wind. Due to the nature of showers, some places are expected to receive an additional 2-5 cm of snow, whereas other places nearby might only receive small amounts. In some coastal areas, showers are expected to begin to turn to rain and sleet, with the largest accumulations of snow inland.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **00:05 on Sun, 04th Mar 2018** until **23:55 on Sun, 04th Mar 2018**

Snow showers are expected to continue over parts of eastern Scotland, bringing a further risk of ice and further accumulations of snow. Further delays to travel and public transport could occur, whilst some rural communities could become or remain cut off. Further impacts to power supplies/mobile phone coverage are also possible.
